

Solarus SIP Trunking/PRI Services

15
YEARS

The benefits of SIP Trunking:

- Eliminates costly BRIs (Basic Rate Interfaces) and PRIs (Primary Rate Interfaces) subscriptions.
 - No need to invest in PSTN gateways and additional line cards as you grow.
 - No need for equipment changeover or disruption to services.
 - Optimal utilization of bandwidth by delivering both data and voice in the same connection.
 - Maximum flexibility in dimensioning and usage of lines as you avoid having to buy capacity in chunks of 23 (T1) or 30 (E1) lines.
 - Flexible termination of calls to preferred providers; calls to anywhere worldwide can be made for the cost of a local one.
 - Redundancy with multiple service providers and links.
 - Requires only one network connection for voice and data so you can maximize your return on investment in network infrastructure.
- SIP Trunking service can help you increase your employee productivity, reduce expenses and enjoy the advanced applications available with a unified network.
 - Connects multiple locations over the same VoIP trunk with local telephone numbers, calling plans and 911 services.
 - Allows convergence of data and voice traffic onto one network, reducing your need for TDM service and simplifying network management.
 - Provides superior network reliability and performance with redundancy throughout the Level 3 infrastructure.
 - Designed for simplified access, multi-location support and cost savings.
