

Solarus Wide Area Network (WAN)

15
YEARS

Solarus Network Reliability:

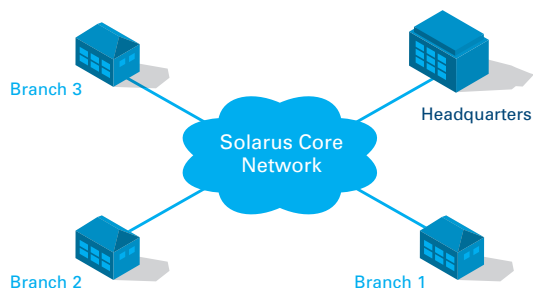

- Solarus is a Cisco certified HIPC (Hosted IP Communications provider), a Cisco reseller, and has earned the Cisco Powered Network designation. This means over 80% of our robust network is powered by the leader in technology, data, routing, networking and voice.
- The Solarus network is viewed as one of the best in the state with POP locations in Wisconsin Rapids, Green Bay, Milwaukee, and Wausau.
- Redundant, carrier-grade core network hardware.
- Network set up in a ring topology, increasing network up-time and resiliency.
- Geographically diverse, redundant paths to the Internet backbone made available by different service providers.

The benefits of WAN:

- Solarus allows your business to connect multiple offices over a single connection by offering WAN – a resilient, reliable, highly redundant data network that will help your business run smoothly and efficiently.
- WAN is a private network that prioritizes voice, video and data proficiently and includes a managed edge device such as a data switch or router.
- WAN includes proactive monitoring for up-time and performance.
- Scalable to meet your needs: The Solarus WAN system grows to accommodate the number of users and the bandwidth demands for voice, data and video traffic.
- It is a flexible, secure solution that will meet the changing needs of your business.
